# SYNOPSIS

## INTRODUCTION

DarshanEase is a web-based application developed to help devotees book temple darshan tickets online easily.

This system allows users to view temples, check available darshan slots, and book tickets from home.

Earlier, devotees had to stand in long queues to get darshan tickets. This was time-consuming and inconvenient.

DarshanEase solves this problem by providing an online platform.

The application is built using MERN Stack:

MongoDB – Database

Express.js – Backend framework

React.js – Frontend

Node.js – Server

The system provides secure login, slot booking, and booking management features.

This makes temple visit planning simple, fast, and convenient.

## SCENARIO BASED CASE STUDY

Shiva is a devotee who visits temples regularly.

He faces following problems:

• Long waiting queues

• No proper slot information

• Difficulty booking tickets

• Waste of time

DarshanEase helps Shiva by providing:

• User Registration and Login

• View temples list

• View darshan slots

• Book tickets online

• View booking history

• Get booking confirmation

## OBJECTIVES OF PROJECT

Main objectives of DarshanEase:

• To develop online darshan ticket booking system

• To reduce long queues in temples

• To provide easy slot booking

• To provide secure login system

• To manage temple and booking data

• To provide booking history

• To provide admin and organizer control

## SYSTEM REQUIREMENTS

### 4.1 Software Requirements

• Operating System: Windows 10 or above

• Frontend: React.js

• Backend: Node.js, Express.js

• Database: MongoDB

• Browser: Google Chrome

• Code Editor: Visual Studio Code

• API Testing Tool: Postman

• Version Control: Git and GitHub

### 4.2 Hardware Requirements

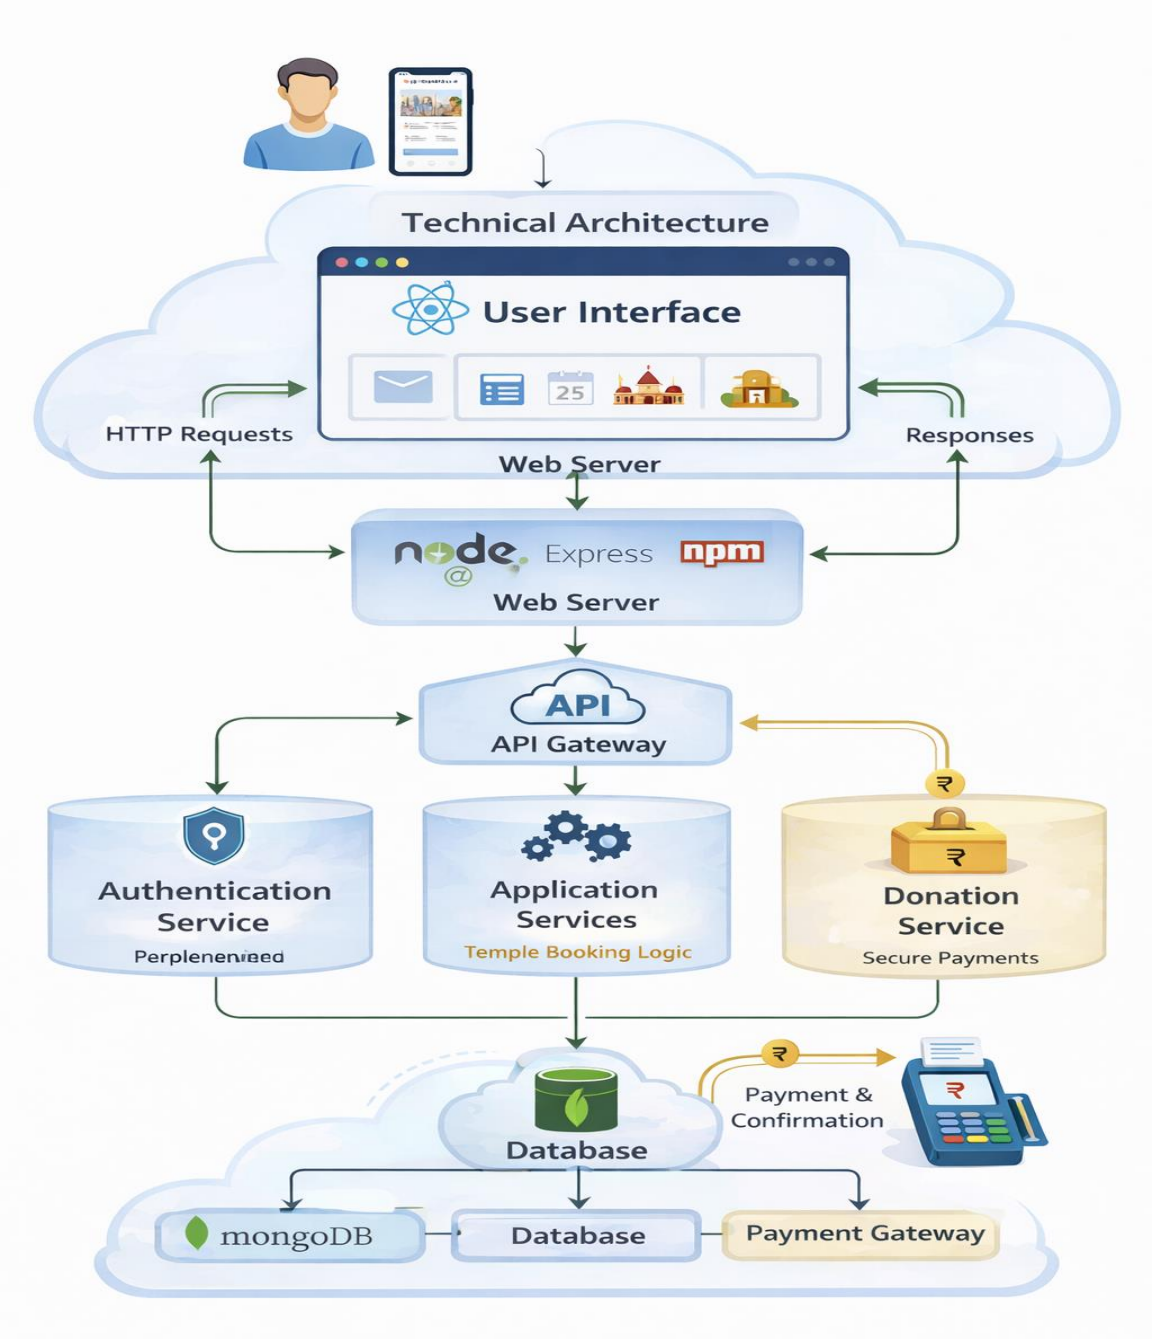
• Processor: Intel i5 or above

• RAM: Minimum 8GB

• Hard Disk: Minimum 1GB free space

• System Type: 64-bit

## PROJECT ARCHITECTURE



DarshanEase uses MERN Stack Architecture.

**Main Components:**

**5.1 User Interface**

Built using React.js.

Used by user to:

Register

Login

View temples

Book darshan

**5.2 Server**

Built using Node.js and Express.js.

Handles requests from frontend.

**Provides API.**

5.3 Database

MongoDB is used.

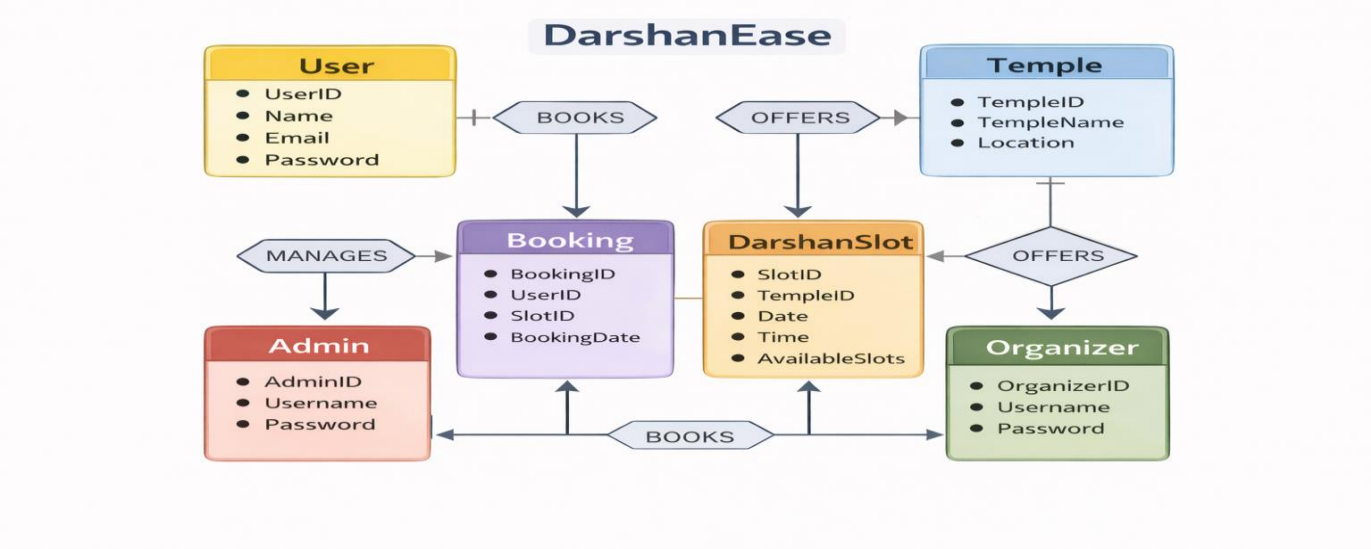
Stores:

User data

Temple data

Booking data

## ER DIAGRAM



Main Entities:

**User**

- UserID
- Name
- Email
- Password

**Temple**

- TempleID
- TempleName
- Location

**Darshan Slot**

- SlotID
- TempleID
- Date
- Time
- Available seats

**Booking**

- BookingID
- UserID
- SlotID
- Booking Date

**Relationships:**

One User can make many bookings.

One Temple can have many slots.

One Slot can have many bookings.

## KEY FEATURES

### User Features

- User Registration
- Login and Logout
- View temples
- View darshan slots
- Book tickets
- View booking history

### Organizer Features

- Add temples
- Add darshan slots
- Manage slots
- View bookings

### Admin Features

- Manage users
- Manage organizers
- Manage temples
- Manage slots
- Full system control

## ROLES AND RESPONSIBILITIES

### User

- Register account
- Login
- Book darshan ticket
- View booking
- Logout

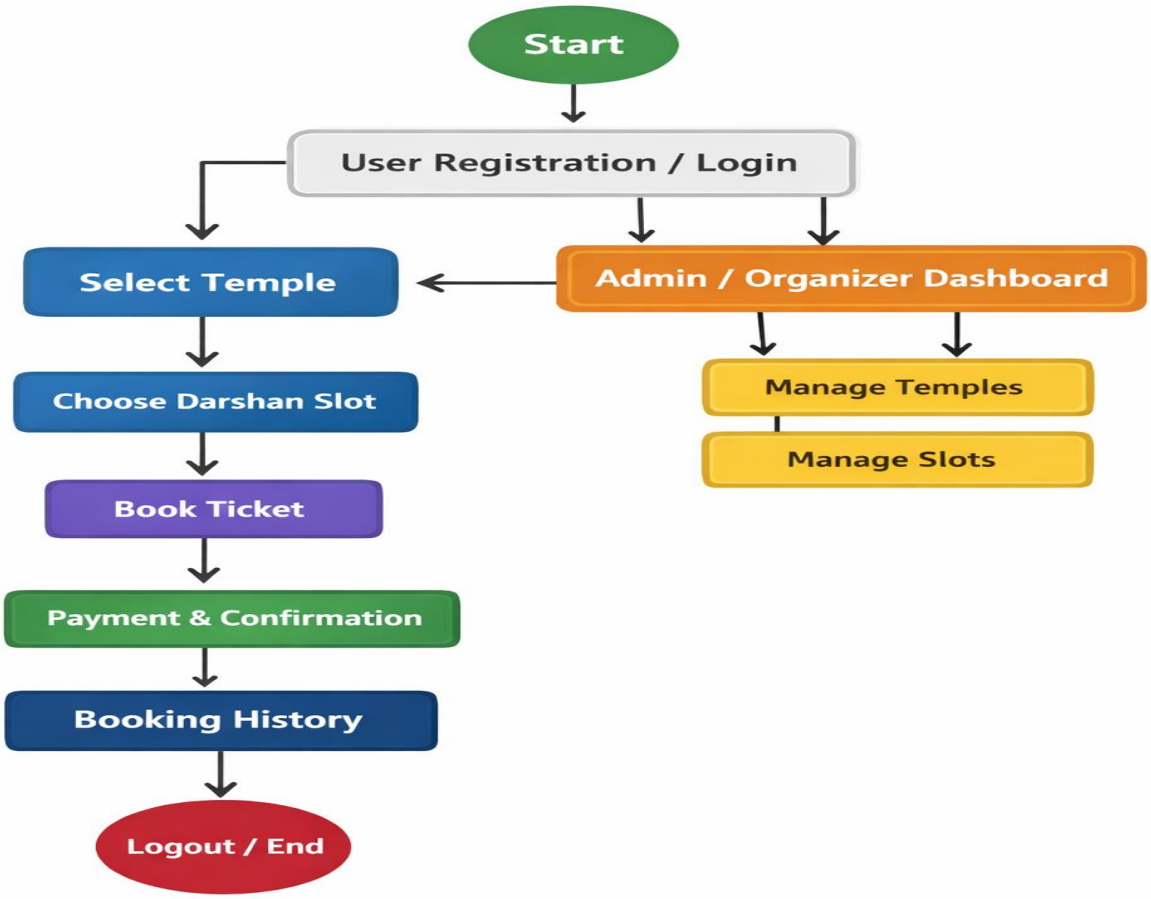
**Organizer**

- Manage temples
- Manage slots
- Manage bookings

**Admin**

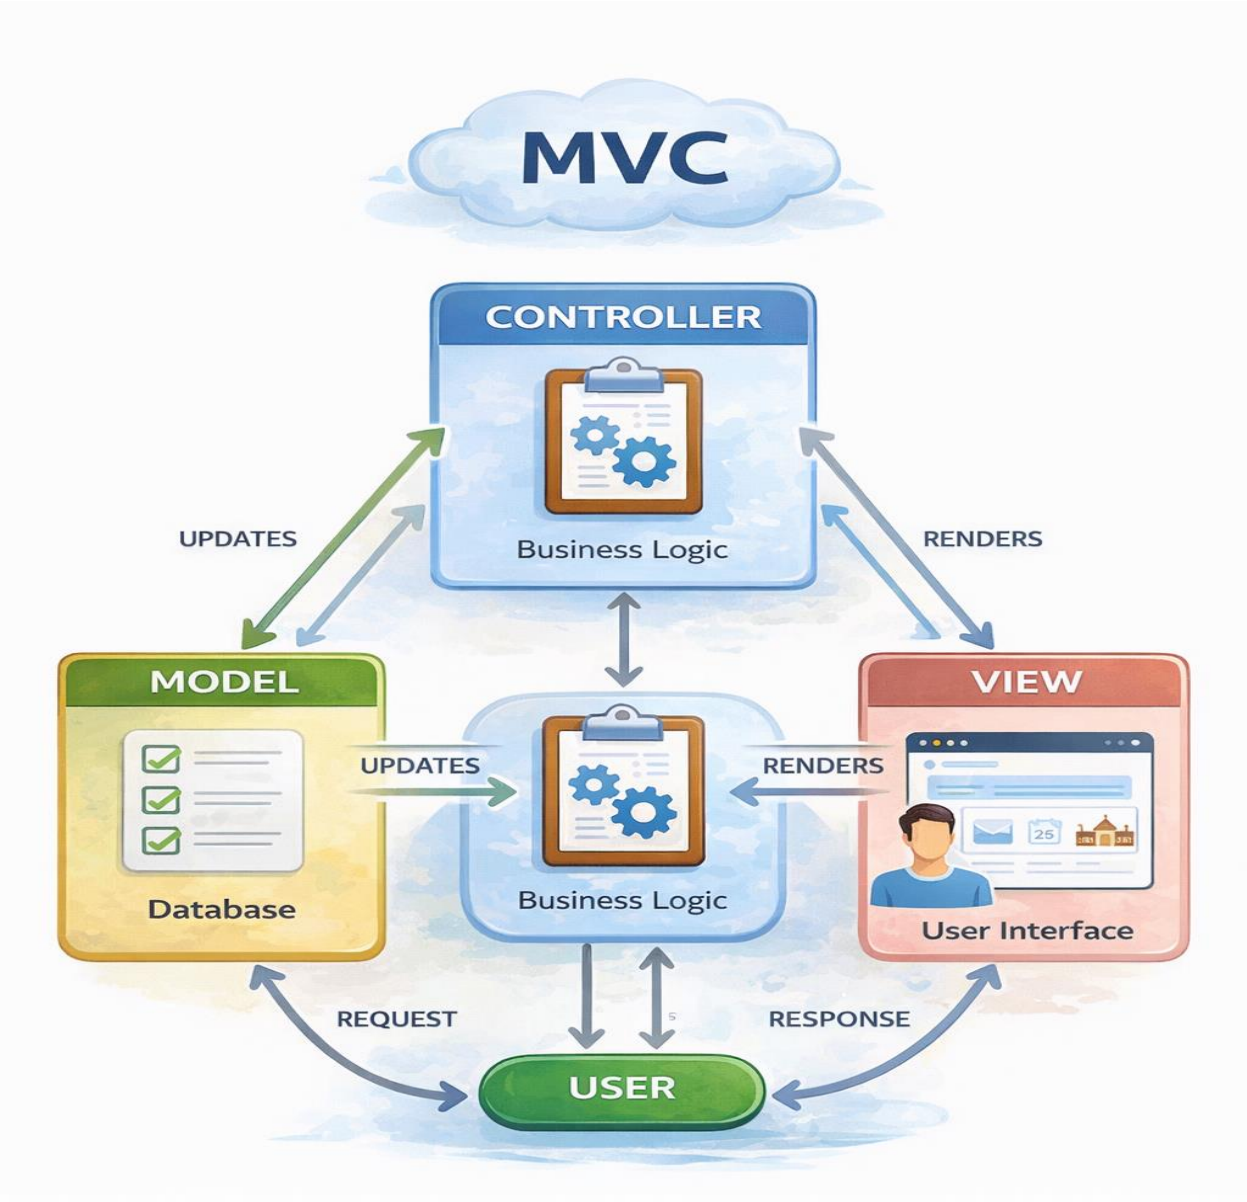
- Manage whole system
- Manage users
- Manage temples
- Manage organizers

## USER FLOW



- User opens website
- User registers
- User login
- User selects temple
- User selects slot
- User books ticket
- Booking confirmation
- User logout

## MVC ARCHITECTURE



DarshanEase follows MVC Pattern.

**Model**

Database structure

MongoDB schemas

**View**

Frontend UI

React components

**Controller**

Backend logic

Handles request and response

**Advantages**

Easy maintenance

Secure

Scalable

## PROJECT SETUP

### Frontend Setup

- cd client
- npm install
- npm run dev
- Runs on

  http://localhost:5173

## CONCLUSION

DarshanEase is a useful web application.

It helps devotees book darshan tickets easily.

It saves time.

It reduces crowd.

It provides secure booking.

It improves temple management.

## FUTURE SCOPE

Online payment

Mobile App

QR Ticket

Email Notification

More temple integration
